

ABSTRACT OF THE DISCLOSURE

1. Contactless data transmission system

5 2.1 Contactless data transmission systems in which initially, through inductive coupling, power transmission takes place have unchangeable security properties that define the reaction speed and the range of such systems.

10 2.2. On the data transmission system there is a switch or a control line with the help of which the input data format can be modified subsequently.

15 2.3. A contactless data transmission system of this kind makes it possible to subsequently adapt to the purpose of application for a wide variety of applications with different requirements in terms of security, reaction speed and range.
